

DIVEK S

Software engineer

PROFILE

I love Backend Technologies. I can quickly adapt to fast-paced work environments. Passionate about working with a knack to learn continuously and go higher in software programming. Currently working as a full-stack developer at Zibtek. Responsible for end to end project delivery, R&D, testing and cloud of the tech stack. Previously I was professionally in freelancing mobile and web apps on my own for 3 years, which loads me up with experience in developing and maintaining apps, providing me with a unique overview of things from the development aspect. Lately having worked as customer service, cash product control in f and b industries part-time.
